1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary report on patentability and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the *PCT Applicant's Guide*.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed invention is patentable or not" (see Also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

D1 describes a detachable (= exchangeable) mobile communication device cover comprising a key board (= keypad). The cover is connected to the keyboard and a bus interface (= common bus 30 [22]), for connection of the cover processor to a mobile communication module, wherein the bus interface is adapted to operate with a plurality of mobile communication modules. The mobile communication module comprising a radio interface for connecting to a mobile communication network by a bus interface to connect communication module to a cover having a keypad. There are software tool comprising program code means stored on a computer readable medium (= RAM & ROM), downloadable program code stored on the medium, (page 1, part 1- part 9).

representation of the theme. Additionally, a coupler, such as a contact or a contact less, facilitates exchange of the data and/or programming instructions between the electronic device and the electronic component embedded within the interchangeable covering. The exchanged data personalizes the electronic devices to the predetermined theme. As a result, personalization of electronic devices to a theme may be accomplished more efficiently, (page 1 part 14, page 6 part 53, abstract).

D3 describes an interchangeable covering for a mobile electronic communication device (mobile device) includes an electronic component having a switch unit, a personalization unit and an interface unit. The switch unit includes key(s) that are accessible to the user when the covering is fitted to the mobile device. The personalization unit stores information such as music data files, audio ring files, screen animation files, data files (e.g., telephone numbers, email addresses, URLs, radio channels, etc.) and/or instructions that can be executed by a processor in the mobile device. The user can use the switch unit to access the information in the personalization unit. The personalization unit interacts with the electronics of the mobile device via the interface unit, (page 1 part 5-8, abstract, figures 3-7).

D4-D7 describe the prior art of the invention.

A device, method and program according to claims 1, 6, 11-12 and 14-16 are known from documents D1-D3 each. Thus, the invention defined in claims 1, 6, 11-12 and 14-16 is not new and consequently lacks novelty and inventive step.

The remaining claims are considered to involve particular detail executions obvious to a person skilled in the art. Therefore, the invention according to these claims is not considered to involve an inventive step.
